PURPOSE:

Amend

Replace

RULE _____ as follows:
(number and title)

OR

SPECIFICATION 11. RIGGING _____ as follows:
(number and title)

PROPOSED TEXT:

11.Rigging

11.1. JIBSTAY - Shall be of steel or stainless steel or any other material but not less than 2.29 in diameter and shall intersect the forward side of the mast min. 6782, max. 6934 above Point "B", and shall intersect the deck at a point min. 6610, max. 6712 forward of Point "T". For the purposes of these measurements, it shall be assumed that the jibstay intersects the mast at an angle of 17E. The jibstay must be carried outside the jib, must be kept fastened at all times, and may be slacked only enough to allow the jib luff wire to take the greater strain. The jibstay may have a firmly fitting tube or coating totaling a maximum of 7.2mm in diameter.

If the jib can be attached without disconnecting the jib luff wire (for example by hanks or tabs), then the use of only one headstay is permitted provided that it meets the above jibstay specifications. The Jibstay may have a firmly fitted tube or coating totaling a maximum of 7.2 mm in diameter.

11.2. OTHER RIGGING – All standing rigging, except the jibstay, shall be of steel or stainless steel. Running rigging, including backstays, may be of any material.

REASON: This resolution was brought to the attention of the International Governing Committee ("IGC") after a series of forestay failures. It was recommended that sailors be allowed the use of Dynemna or similar products to increase the strength and decrease the failure of the jibstay. The resolution only changes the allowed material. Instead of steel or stainless steel, sailors may use any material as long as it complies with other Class specifications.

For Office Use Only: _____ for _____
